Until now, I have not been able to find any Alignment Macros for 2013, and 2013 users are not using 2013, so there is no align button or Macros for it. The current version of the Word community project is 2013 (in a folder labeled "project"). So, when I open 2013 to create a Template, here is what I am working with. Proper

Macros for 2013. This is the template I am using - ABL-2013. I am trying to figure out how to create the Macro I need. Here is what I have so far. Sub AutoHookup()  
ActiveSheet.Cells.AutoFilter Field:=2, Criteria1:=">0" End Sub This is the Macro that I am trying to create and make into a Template-2013. It works exactly the way I want it to work when I open 2013 to make a Sheet Template for a particular Sheet name. When I open 2013 and select a template, the macro is still in the template. In 2013, the macro Name is "Untitled". I want to make it "Unnamed Template". I already have that as a name in the template I am using. The 2010 and older ones do not have a macro name, so there is no problem with that. In 2013, the macro name is "Untitled". Here is the code I have in the template - Unnamed Template (2013). Sub Unnamed Template (2013) ActiveSheet.Cells.AutoFilter Field:=2, Criteria1:=">0" End Sub I am having trouble figuring out how to create the Macro for 2013. I want to make a macro for both 2010 and 2013. I have attached a file with what I need for 2013. I would like to make it so that I can open 2013 and have a set of templates already created by searching using a String to find all the templates that the folder already contains. If you open 2013 and press CTRL-T, you can see that there are already two templates in the folder. I want to make it so that I can open 2013 and have a
